Summary

Software Engineer with strong experience in backend development, cloud service integration, and technical leadership of mobile projects. Currently serving as a Development Manager at PartnerHelper, leading the development of an iOS application for efficient medical appointment management using AI, designing and maintaining the backend with Azure and Microsoft Dynamics integrations, and coordinating the development of AI agents powered by Large Language Models (LLMs) in Azure for businesses.

I possess advanced skills in Python and Flask, with a strong focus on implementing scalable, secure solutions aligned with best deployment practices. In most of my projects, I apply Object-Oriented Programming (OOP), SOLID principles, and the Model-View-Controller (MVC) pattern, ensuring clean, maintainable, and easily scalable architectures.

I have developed projects in natural language processing, audio transcription, and synthetic voice generation, as well as the design of conversational agents (voice, text, and chat) focused on customer acquisition and support through Meta channels and web chats. These solutions integrate AI into corporate internal systems, optimizing processes and enhancing the user experience.

Additionally, I have developed automation applications to optimize personal and organizational processes, including automatic download systems and repetitive task scripts. I am characterized by my analytical skills, problem-solving ability, adaptability to new technologies, and commitment to delivering effective and scalable solutions. I am a native Spanish speaker with intermediate English proficiency.

Experience

PartnerHelper, Development Manager

Remote

AI leader, responsible for developing an iOS medical appointment app with AI and creating AI agents for clients. December 2025 — Present

- Leader of the development and architecture of an iOS application for medical appointments.
- Integrations and deployments with Azure and Microsoft Dynamics.
- Design and deployment of LLM-based AI agents for businesses.
- Team coordination and delivery schedule management.

PartnerHelper, Application Engineer

Remote

Backend-focused developer for iOS medical appointment applications.

May 2024 — December 2025

- Developed APIs enabling core functionalities in an iOS application
- Integrations and deployments with Azure and Microsoft Dynamics.
- Collaborated on service architecture and deployments.

Universidad Tecnológica de Pereira, Technical Support (Part-time)

Presential

Developer of an web application to manage computer labs and control lost items within August 2024 — December 2024

- Development backend features for the application.
- Development frontend features for the application.
- Development, deploy and maintained.

José Jaramillo Villegas, Development Assistant

Remote

Auxiliar Backend-focused developer for iOS medical appointment applications.

March 2023 — May 2024

- Developed APIs enabling core functionalities in an iOS application
- Integrations and deployments with Azure and Microsoft Dynamics.

Education

Universidad Tecnológica de Pereira, MSc in Artificial Intelligence and Data Science August 2025 — Present

Graduated **Universidad Tecnológica de Pereira**, BSc in Software Engineering January 2020 — February 2025

Skills

Artificial Intelligence: Large Language Models (LLMs), Tools-Calling (LLMs), Automatic Speech Recognition (ASR), Text-to-Speech (TTS)

Languages: Python, HTML, CSS, JavaScript

Frameworks and libraries: Flask, Vue.js

Databases: PostgreSQL, SQL, Dynamics (CRM)

Tools: Git, Postman, Docker

Cloud - Azure - Microsoft: Azure AI Foundry, Azure Blob Storage, Azure Web Apps, Power Automate

Cloud - Google: Firestore, Realtime Database

Languages

Spanish: Native

English: B1 Level
